srnd | CodeDay

At CodeDay, students learn to use code to express their creativity.

At CodeDay, students pitch their own game ideas, then work with other students to make them a reality over a weekend.

Students don't need any coding experience to attend! Our staff and tech mentors will help them learn the code to bring their ideas to life.

Since 2011, we've run more than 350 CodeDays in 49 cities worldwide, for over 30,000 students.

CodeDay in a nutshell:

- **What:** 24 hour long event where students make games/apps.
- **Age range:** Middle school, high school, and college undergrads.
- **Prerequisites:** None.
- **Outcomes:**

>90% leave with a complete project.

71% continue to create with code.

What have students created in the past?

TimeSwap

In this game created by a team of six beginners, a scientist chases his dog through history. His only weapon: a gun which sends enemies back in time... where he'll need to fight them again. Featuring hundreds of custom "pixel art" sprites.

Ready to register?

Dates:
November, February, and April/May. See CodeDay.org.

Address:
Varies, visit CodeDay.org to see information for your city.

Cost:
$7/student
(scholarships available)

Registration:
Visit CodeDay.org or email schools@srnd.org

More Past Projects:

- **Leon (LA) -** Match chords on a guitar to shoot enemies.
- **Anime Sprinter (Atlanta) -** An anime-art parkour game.
- **Abyss (Chicago) -** Choose your own adventure... in space.

(See more at showcase.srnd.org.)

srnd | CodeDay

We work with hundreds of districts and schools, and make things easy.

Here are some common questions we get, but feel free to email us to discuss any specific questions or requests: schools@srnd.org

Safety, Security, and Privacy

Do you do background checks?

Yes. Staff, volunteers, and mentors who spend significant time with students, or who will be present overnight, must complete a background check.

How secure is the venue?

The venue is locked down except during kickoff and presentations. Throughout the event, all students are supervised by our staff.

How is student PII handled?

We collect only basic directory information to register, which is stored securely and not shared. Parents must sign a photo release before students may attend.

Attending CodeDay

Must we provide chaperones?

While we appreciate schools which can provide chaperones, it is not required. Please ensure your school conducts a background check on any chaperones.

Are there really no prerequisites?

Any student who is excited to make an app or game will do well at CodeDay. A quarter of our participants have no prior experience, in fact.

Can parents attend with students?

For security reasons, parents may only attend the kickoff (Saturday, 11-12:30) and presentations (Sunday, 10-12), except if they are an official school chaperone.

Participating in CodeDay

What projects will be assigned?

CodeDay does not assign students to projects: students decide on their own project at the start! Most projects are games.

Do we compete as a school team?

You may (up to teams of 6), but we recommend you give your students the flexibility to work with students from other schools.

What will teachers do?

CodeDay is a creative event, so teachers do not provide a typical amount of "instruction." Instead we recommend you help students with project management.

What language is used?

Students can use any programming language they're familiar with. Our intro workshop is taught in Construct 3.

What will students learn?

Students will be able to: work with a teach to create specifications for a project, find resources to solve technical problems, and program a complete app or game.
