srnd | CodeDay

Help students make amazing projects and get interested in coding!

CodeDay is a 24-hour tech education event which gets newer students (ages 12-25) excited about coding. There are two ways to get involved:

Mentoring (Saturday, 2-hr shifts)

Helping Learn to Learn: Many students believe that once you get a degree, you just "know" all of programming. Help them learn to learn!

Project Management: Students have rarely learned to set goals and achieve milestones.

Networking: Advanced students are often interested in learning about career paths and meeting professionals.

Judging (Sunday, 9am-12pm)

Meet Students: As a judge, you'll get to meet with each of the teams, try their projects, and talk with them about their interests in Computer Science.

Give Awards: You'll give out 3-7 awards, but don't worry: there are no big prizes, so it's low-pressure.

We need your help: November 9-10

Mentors should have experience in design, UI/UX, project management, or programming (any language).

There are no experience requirements for judges.

Visit CodeDay.org/volunteer for more info and to apply!

What have students created in the past?

TimeSwap

In this game created by a team of six beginners, a scientist chases his dog through history. His only weapon: a gun which sends enemies back in time... where he'll need to fight them again. Featuring hundreds of custom "pixel art" sprites.

More Past Projects:

- **Leon (LA) -** Match chords on a guitar to shoot enemies.
- **Anime Sprinter (Atlanta) -** An anime-art parkour game.
- **Abyss (Chicago) -** Choose your own adventure... in space.
