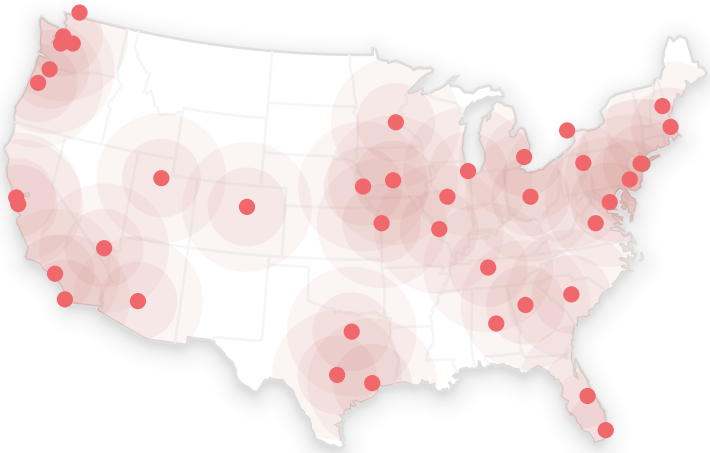
srnd | CodeDay

CodeDay: increasing student demand for CS classes in just 24 hours.

CodeDay is a worldwide event where student programmers, artists, musicians, actors, and everyone else get together and build apps & games for 24 hours. Students of all skill levels are welcome.

SRND, the non-profit behind CodeDay, started the event in 2011. Since then, we have run more than 300 CodeDays for over 30,000 students.

CodeDay focuses on attracting non-traditional CS students. Combined with our scale, this provides our sponsors with access to an audience not available with other events.



The events in a nutshell:

- **What:** A recurring 24-hour programming marathon ("hackathon").
- **Who:** High school through college students.
- **When:** November, February, and April/May.
- **Size:** 100-500 students/city, 3,000-5,000/season, ~10,000/year.
- **History:** 300+ events and 30,000+ students since 2011.

Case Study: Arizona

Arizona's businesses require CS talent, but local students haven't been interested (and those who were generally left).

In partnership with local tech employer State Farm, we launched CodeDay in 2012. In two years, we helped grow the number of high school students taking CS students by 216% (double the national average for that period).

> *CodeDay is doing such a great job of trying to make this type of education accessible to everyone.*

CS Fairs: helping classes explore careers in leading technologies.

These fun events get students excited about the many career paths in Computer Science, introduce students to industry professionals who can serve as role models, and connect students to college and university CS programs.

While CodeDay is designed for students who are totally new to coding, CS Fairs are designed for students already enrolled in a class, but who don't currently plan to pursue Computer Science focused careers.

What technologies can students explore at a CS Fair?

CS Fairs allow students to learn about careers which are too new to be taught in schools. In the past, we've hosted interactive workshops and speakers on topics including:

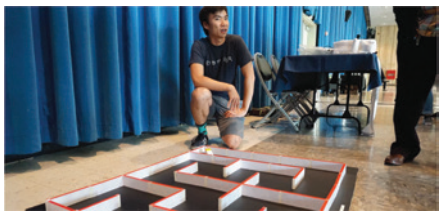
- Blockchain/Cryptocurrency
- Internet of Things (IoT)
- 3D Printing and Laser Cutting
- Mobile App Development
- Cyber Security
- Data Science
- AI

The events in a nutshell:

- **What:** Day-long multi-school field trips.
- **Who:** High school intro/AP CS classes.
- **When:** Spring season.
- **Size:** 200+ students per event, 500+ per year (growing).
- **History:** Produced in partnership with TEALS starting 2018.

What's in a CS Fair?

Cutting-Edge Tech Demos

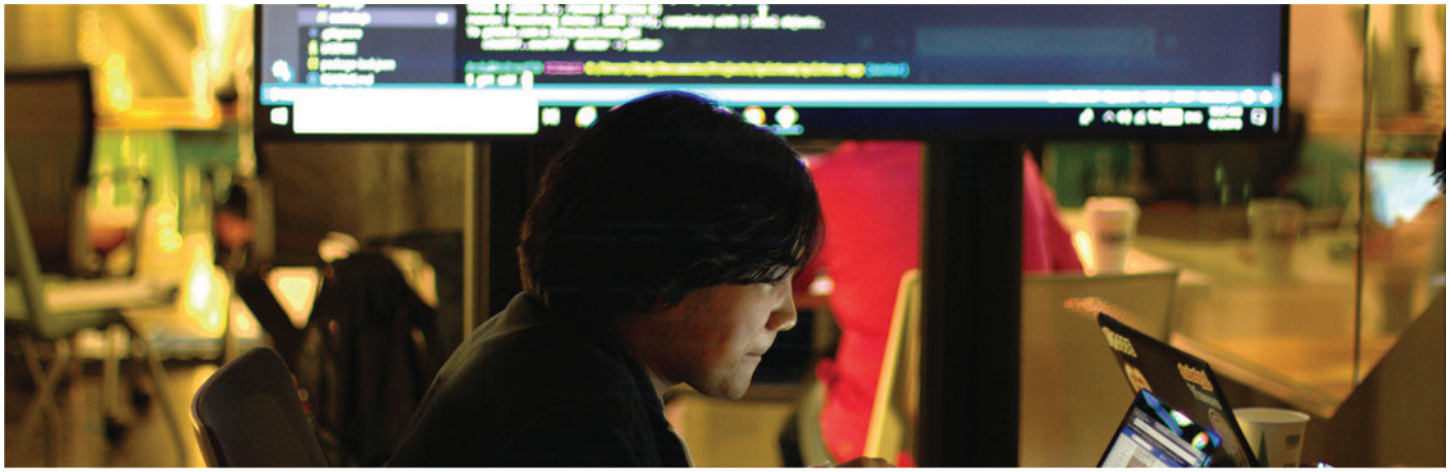


Employer Networking

New Tech Workshops

Local Industry Speakers

srnd | CodeLabs



CodeLabs: an internship program for students everywhere.

CodeLabs works sort of like a summer internship – students are matched with a mentor, and spend the summer creating a project and learning.

Unlike a traditional internship, however, students propose their own projects, and meet with their mentor online, with a small group of similar students.

We offer CodeLabs to CS students in hundreds of schools and districts across North America.

Why CodeLabs? Students who participate:

- Get access to mentors from the world's leading tech companies.
- Gain valuable real-world experience.
- Start building a professional network early.

We also partner with Twitch.tv to broadcast online workshops which dive deep into the technologies defining the future, and show students how they can get involved today.

The events in a nutshell:

- **What:** A virtual summer internship.
- **Who:** High school through college students.
- **When:** July - August
- **Size:** 2,000-5,000 students per year (and growing).
- **History:** Started in 2017.

What sort of projects have students made?

- "A machine learning bot which suggests colors for your palette."
  –Sasha M, Seattle
- "A React web app to help doctors communicate with Cystic Fibrosis patients."
  –Mauricio R, Los Angeles
- "A chat app which allows communication during natural disasters."
  – Alisha D, Richmond VA
